Possible!

PMP&E met the challenge. They started at Friday noon and had the new DAF System fully operational early Monday morning.

The project included removal of the old inclined plate clarifier system and installing a 300 gpm IWWS Dissolved Air Floatation system in the same space. PMP&E performed all rigging and process piping and assisted in the start-up.

The General Manager and Chief Engineer was surprised and pleased that the new treatment system was on line in time and performing as the city required.

"I wanted to express appreciation for meeting the impossible scheduled deadline that you were given for this project. I have to say that in 28 years of engineering I have never seen such professionalism and dedication devoted to getting the job done."

- ALSCO - Reno, Chief Engineer

MAKING POSSIBLE THE IMPOSSIBLE.

CHALLENGE: Textile Rental Plant Needed Failing Boiler Replaced Over The Weekend. (Impossible?)

Process Mechanical Piping & Erection met the challenge. They started at Friday noon and had the new boiler fully operational by Sunday afternoon.

The project included removal of the old boiler and installation of a new highly efficient 400 hp, 4 pass wetback boiler. PMP&E also repiped the steam, feedwater, gas, fuel oil and blowdown piping as well as reconnected the boiler stack.

The boiler was ready for startup and boil out Saturday at 3:00 p.m. It was tested Sunday afternoon and was generating steam Monday morning as the plant opened. The General Manager was very pleased that the plant experienced no downtime.

Possible!

With 37 years of experience in various turnkey projects, no one is more qualified to install equipment and piping in your facility. We have the ability to solve your most impossible challenges and make it look easy.
